## fd\_fem\_updownout\_bs

Input parameters:

- SpaceStepNumber  $N$
- TimeStepNumber  $M$
- Theta  $\frac{1}{2} \leq \theta \leq 1$
- Refinement  $1 \leq ref \leq 4$

Output parameters:

- Price
- Delta

This finite element scheme [there](#) used a trapeizodal grid that is refined near the barriers, using a simple bell-shaped function to compute the point density in space.[\[1\]](#) In the american case we use the splitting method. It seems that it converges very slowly.

```
/*Initial Mesh*/
Computation of initial mesh.
```

```
/*New Mesh*/
Computaton of new mesh.
```

```
/*Memory Allocation*/
```

```
/*Time Step*/
Define the time step  $k = \frac{T}{N}$ .
```

**/\*Space Step\*/**

Define the space step  $h = \frac{2l}{M}$ .

**/\*Terminal value\*/**

Put the value of the payoff into a vector  $P_{old}$  which will be used to save the option value.

**/\*Finite difference Cycle\*/**

At any time step, described by the loop in the variable  $TimeIndex$ , we have to solve the system  $M^h v = NP$ .

**/\*New Mesh computing\*/**

**/\*Computation of Lhs coefficients\*/**

**/\*Computation of Rhs coefficients\*/**

**/\*Right factor\*/**

Compute the right side factor  $NP$  and save the result in the vector  $V$ .

**/\*Dirichlet Boundary Condition\*/**

We set Dirichlet Boundary conditions on the barrier.

**/\*Gauss method\*/**

We solve the system  $M^h v = S$  in two steps:

1. First loop consists in solving  $L\bar{v} = S$ . The result is saved in  $S$ .  
[there](#).
2. Second loop consists in solving  $Uv = \bar{v} = S$ . The result is saved in  $P$ .

**/\*Splitting for American case\*/**

For American options, we compare at each time step the solution of  $M^h v = NP$  saved in  $P$  with the payoff function saved in  $Obst$ . We save the result in  $P$  [there](#).

**/\*Price\*/**

One uses linear interpolation to find the option value corresponding to the initial stock price.

**/\*Delta\*/**

One uses linear interpolation to find the delta value corresponding to the initial stock price.

**/\*Memory Desallocation\*/**
