## George Boole

- 2 November 1815 - 8 December 1864.
- English mathematician, philosopher and logician.
- known as a founder of the field of Computer Science.

## George Boole

- 2 November 1815 - 8 December 1864.
- English mathematician, philosopher and logician.
- known as a founder of the field of Computer Science.
- Notable contribution: Boolean Algebra.

[^0]
## Boolean Algebra

- Possible values of the variables: TRUE or FALSE.
- Basic operations: AND, OR and NOT.

| AND | FALSE | TRUE |  | OR | FALSE | TRUE |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| FALSE | FALSE | FALSE |  | FALSE | FALSE | TRUE |
| TRUE | FALSE | TRUE |  | TRUE | TRUE | TRUE |
|  |  |  | NOT |  |  |  |
|  |  |  | FALSE | TRUE |  |  |
|  |  |  | TRUE | FALSE |  |  |

Many other operations can be built from these basic operations.

## Boolean Algebra

First introduced by G. Boole in "An Investigation of the Laws of Thought", 1854.

The term "Boolean Algebra" is suggested by Sheffer in 1913.

Boolean Algebra (a.k.a. digital logic) is fundamental in Computer Science, Set Theory, Statistics...

## Backgrounds

## Preliminaries

## Example

## Is taking my umbrella a good option?

## Example

## Is taking my umbrella a good option?

## 1. Is it raining?

## Example

## Is taking my umbrella a good option?

## 1. Is it raining?

## 2. Bad weather forecast?

## Example

## Is taking my umbrella a good option?

1. Is it raining?
2. Bad weather forecast?
3. But ... do I go by car?

## Example

## Is taking my umbrella a good option?

1. Is it raining?
2. Bad weather forecast?
3. But ...do I go by car?

## Definitions

## Boolean Functions

## Binary Representation

$\mathbb{F}_{2}=(\{0,1\}, \oplus, \cdot)$ : Finite Field of 2 elements.

$1,0 \longleftrightarrow$ TRUE, FALSE,<br>$\oplus$ (addition modulo 2$) \longleftrightarrow$ XOR (Exclusive OR),<br>$\cdot \longleftrightarrow$ AND.

Remark:

$$
\operatorname{XOR}(A, B)=\operatorname{OR}(\operatorname{AND}(A, \operatorname{NOT}(B)), \operatorname{AND}(\operatorname{NOT}(A), B)) .
$$

| XOR | FALSE | TRUE |
| :--- | :---: | :---: |
| FALSE | FALSE | TRUE |
| TRUE | TRUE | FALSE |

## Boolean Functions

Truth table of a Boolean function.

| $x_{0}$ | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $x_{1}$ | 0 | 0 | 1 | 1 | 0 | 0 | 1 | 1 |
| $x_{2}$ | 0 | 0 | 0 | 0 | 1 | 1 | 1 | 1 |
| $f\left(x_{0}, x_{1}, x_{2}\right)$ | 0 | 1 | 1 | 1 | 0 | 0 | 0 | 0 |

## Definition

A Boolean function of $n$ variables is a function from $\mathbb{F}_{2}^{n}$ into $\mathbb{F}_{2}$.

$$
\begin{array}{cccc}
f: & \mathbb{F}_{2}^{n} & \rightarrow & \mathbb{F}_{2} \\
\left(x_{0}, \ldots, x_{n-1}\right) & \mapsto & f\left(x_{0}, \ldots, x_{n-1}\right) .
\end{array}
$$

## Boolean Functions

Value vector of $f$ : word of $2^{n}$ bits consisting of every $f(x)$, for $x \in \mathbb{F}_{2}^{n}$.
Example: $f\left(x_{0}, x_{1}, x_{2}\right)=(0,1,1,1,0,0,0,0)$.
Definition [Hamming weight]
The Hamming weight of a Boolean function $f, w t(f)$, is the binary weight of its value vector.

Example: $w t(f)=w t(0,1,1,1,0,0,0,0)=3$.

A Boolean function of $n$ variables is balanced if and only if $w t(f)=2^{n-1}$.

## Algebraic Normal Form (ANF)

## Proposition

Any Boolean function $f$ of $n$ variables has a unique multivariate polynomial representation:

$$
f\left(x_{0}, \ldots, x_{n-1}\right)=\bigoplus_{u=\left(u_{0}, \ldots, u_{n-1}\right) \in \mathbb{F}_{2}^{n}} a_{u} x^{u}, \quad x^{u}=\prod_{i=0}^{n-1} x_{i}^{u_{i}}
$$

and $a_{u} \in \mathbb{F}_{2}$.
Example:

$$
\begin{aligned}
x^{110} & =x_{0} x_{1} \\
f\left(x_{0}, x_{1}, x_{2}\right) & =x_{0} \oplus x_{0} x_{1} \oplus x_{0} x_{1} x_{2}
\end{aligned}
$$

Moreover, the coefficients of the ANF and the value of $f$ satisfy:

$$
a_{u}=\bigoplus_{x \preceq u} f(x) \text { and } f(u)=\bigoplus_{x \preceq u} a_{x},
$$

where $x \preceq u$ if and only if $x_{i} \leq u_{i}$ for all i.

## Example

| $x_{0}$ | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $x_{1}$ | 0 | 0 | 1 | 1 | 0 | 0 | 1 | 1 |
| $x_{2}$ | 0 | 0 | 0 | 0 | 1 | 1 | 1 | 1 |
| $f\left(x_{0}, x_{1}, x_{2}\right)$ | 0 | 1 | 1 | 1 | 0 | 0 | 0 | 0 |

$$
\begin{aligned}
& a_{000}=f(000)=0 \\
& a_{100}=f(000) \oplus f(100)=1 \\
& a_{010}=f(000) \oplus f(010)=1 \\
& a_{110}=f(000) \oplus f(100) \oplus f(010) \oplus f(110)=1 \\
& a_{001}=f(000) \oplus f(001)=0 \\
& a_{101}=f(000) \oplus f(100) \oplus f(001) \oplus f(101)=1 \\
& a_{011}=f(000) \oplus f(010) \oplus f(001) \oplus f(011)=1 \\
& a_{111}=\bigoplus_{x \in \mathbb{F}_{2}^{3}} f(x)=w t(f)(\bmod 2)=1 .
\end{aligned}
$$

Then $\quad f(x)=x_{0} \oplus x_{1} \oplus x_{0} x_{1} \oplus x_{0} x_{2} \oplus x_{1} x_{2} \oplus x_{0} x_{1} x_{2}$.

## Definitions

## Vectorial Boolean Functions

## Vectorial Boolean Functions

## Definition [Vectorial Boolean Function]

A vectorial Boolean function of $n$ inputs and $m$ outputs ( $(n, m)$ function) is a function from $\mathbb{F}_{2}^{n}$ into $\mathbb{F}_{2}^{m}$ :

$$
\begin{array}{lccc}
F: & \mathbb{F}_{2}^{n} & \rightarrow & \mathbb{F}_{2}^{m} \\
& \left(x_{0}, \ldots, x_{n-1}\right) & \mapsto & \left(y_{0}, \ldots, y_{m-1}\right) .
\end{array}
$$

The Boolean functions $f_{i}:\left(x_{0}, \ldots, x_{n-1}\right) \mapsto y_{i}, 0 \leq i \leq m-1$, are called the coordinate functions.

Linear combinations of the coordinate functions:

$$
x \mapsto \lambda \cdot\left(f_{0}(x), \ldots, f_{m-1}(x)\right), \lambda \in \mathbb{F}_{2}^{m}, \lambda \neq 0,
$$

are called the component functions.

## Proposition

An $(n, n)$-function is a permutation of $\mathbb{F}_{2}^{n}$ if and only if all its component functions are balanced.

## Example of a Vectorial Boolean Function

 $n=4$| 0 | $\leftrightarrow$ | $(0,0,0,0)$ | 8 | $\leftrightarrow$ |
| :--- | :--- | :--- | :--- | :--- |
| 1 | $\leftrightarrow$ | $(1,0,0,0)$ | 9 | $\leftrightarrow$ |
|  | $\leftrightarrow$ | $(1,0,0,1)$ |  |  |
| 3 | $\leftrightarrow(0,1,0,0)$ | $a$ | $\leftrightarrow$ | $(0,1,0,1)$ |
| 4 | $\leftrightarrow(1,1,0,0)$ | $b$ | $\leftrightarrow$ | $(1,1,0,1)$ |
| 5 | $\leftrightarrow(1,0,1,0)$ | $c$ | $\leftrightarrow$ | $(0,0,1,1)$ |
| 6 | $\leftrightarrow(0,1,1,0)$ | $d$ | $\leftrightarrow$ | $(1,0,1,1)$ |
| 7 | $\leftrightarrow(1,1,1,0)$ | $e$ | $\leftrightarrow$ | $(0,1,1,1)$ |
|  |  | $f$ | $\leftrightarrow$ | $(1,1,1,1)$ |

## Example of a Vectorial Boolean Function

 $n=4$| $x$ | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | $a$ | $b$ | $c$ | $d$ | $e$ | $f$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $S_{0}(x)$ | 1 | 0 | 1 | 0 | 0 | 1 | 1 | 0 | 0 | 1 | 1 | 0 | 0 | 0 | 1 | 1 |
| $S_{1}(x)$ | 1 | 1 | 1 | 0 | 1 | 0 | 1 | 0 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 0 |
| $S_{2}(x)$ | 1 | 1 | 0 | 1 | 1 | 1 | 1 | 0 | 0 | 0 | 0 | 0 | 1 | 0 | 0 | 1 |
| $S_{3}(x)$ | 1 | 1 | 1 | 1 | 0 | 1 | 0 | 1 | 0 | 0 | 1 | 1 | 0 | 0 | 0 | 0 |

$x=\left(x_{0}, x_{1}, x_{2}, x_{3}\right):$
$S_{0}(x)=1+x_{0}+x_{2}+x_{3}+x_{1} x_{2}+x_{1} x_{3}+x_{2} x_{3}+x_{0} x_{2} x_{3}+x_{1} x_{2} x_{3}$
$S_{1}(x)=1+x_{3}+x_{0} x_{1}+x_{0} x_{2}+x_{0} x_{3}+x_{0} x_{1} x_{2}+x_{0} x_{1} x_{3}+x_{0} x_{2} x_{3}$
$S_{2}(x)=1+x_{1}+x_{3}+x_{0} x_{1}+x_{1} x_{2}+x_{1} x_{3}+x_{2} x_{3}+x_{0} x_{1} x_{3}+x_{0} x_{2} x_{3}$
$S_{3}(x)=1+x_{2}+x_{3}+x_{0} x_{2}+x_{1} x_{3}+x_{2} x_{3}+x_{0} x_{2} x_{3}+x_{1} x_{2} x_{3}$

## Identifying $\mathbb{F}_{2}^{n}$ with the Finite Field $\mathbb{F}_{2^{n}}$

Let $\alpha$ be a root of an irreducible polynomial of degree $n$ over $\mathbb{F}_{2}$. The Finite Field $\mathbb{F}_{2^{n}}$ consists of every linear combinations of elements $1, \alpha, \ldots, \alpha^{n-1}$ over $\mathbb{F}_{2}$.

$$
\begin{aligned}
\varphi: \mathbb{F}_{2}^{n} & \simeq \mathbb{F}_{2^{n}} \\
\left(x_{0}, \ldots, x_{n-1}\right) & \mapsto \sum_{i=0}^{n-1} x_{i} \alpha^{i},
\end{aligned}
$$

Example: $n=4, \alpha$ a root of the irreducible polynomial $1+x+x^{4}$.

|  | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathbb{F}_{2}^{4}$ | $(0,0,0,0)$ | $(1,0,0,0)$ | $(0,1,0,0)$ | $(1,1,0,0)$ | $(0,0,1,0)$ | $(1,0,1,0)$ | $(0,1,1,0)$ | $(1,1,1,0)$ |
| $\mathbb{F}_{2^{4}}$ | 0 | 1 | $\alpha$ | $1+\alpha$ | $\alpha^{2}$ | $1+\alpha^{2}$ | $\alpha+\alpha^{2}$ | $1+\alpha+\alpha^{2}$ |
| $\mathbb{F}_{2^{4}}$ | 0 | 1 | $\alpha$ | $\alpha^{4}$ | $\alpha^{2}$ | $\alpha^{8}$ | $\alpha^{5}$ | $\alpha^{10}$ |
|  | 8 | 9 | $a$ | $b$ | $c$ | $d$ | $e$ | $f$ |
| $\mathbb{F}_{2}^{4}$ | $(0,0,0,1)$ | $(1,0,0,1)$ | $(0,1,0,1)$ | $(1,1,0,1)$ | $(0,0,1,1)$ | $(1,0,1,1)$ | $(0,1,1,1)$ | $(1,1,1,1)$ |
| $\mathbb{F}_{2^{4}}$ | $\alpha^{3}$ | $1+\alpha^{3}$ | $\alpha+\alpha^{3}$ | $1+\alpha+\alpha^{3}$ | $\alpha^{2}+\alpha^{3}$ | $1+\alpha^{2}+\alpha^{3}$ | $\alpha+\alpha^{2}+\alpha^{3}$ | $1+\alpha+\alpha^{2}+\alpha^{3}$ |
| $\mathbb{F}_{2^{4}}$ | $\alpha^{3}$ | $\alpha^{14}$ | $\alpha^{9}$ | $\alpha^{7}$ | $\alpha^{6}$ | $\alpha^{13}$ | $\alpha^{11}$ | $\alpha^{12}$ |

## Univariate Polynomial Representation

## Proposition

Any $(n, n)$-function $F$ admits a unique univariate polynomial representation over $\mathbb{F}_{2^{n}}$, of degree at most $2^{n}-1$ :

$$
F(x)=\sum_{i=0}^{2^{n}-1} c_{i} x^{i}, \quad c_{i} \in \mathbb{F}_{2^{n}}
$$

## Univariate Polynomial Representation

Example: $n=4$
$\alpha$ a root of the primitive polynomial $1+x+x^{4}$.

| $x$ | 0 | 1 | $\alpha$ | $\alpha^{2}$ | $\alpha^{3}$ | $\alpha^{4}$ | $\alpha^{5}$ | $\alpha^{6}$ | $\alpha^{7}$ | $\alpha^{8}$ | $\alpha^{9}$ | $\alpha^{10}$ | $\alpha^{11}$ | $\alpha^{12}$ | $\alpha^{13}$ | $\alpha^{14}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $S(x)$ | $\alpha^{12}$ | $\alpha^{11}$ | $\alpha^{7}$ | $\alpha^{5}$ | 0 | $\alpha^{6}$ | $\alpha^{10}$ | $\alpha^{2}$ | $\alpha^{9}$ | $\alpha^{13}$ | $\alpha^{14}$ | $\alpha^{3}$ | 1 | $\alpha^{8}$ | $\alpha$ | $\alpha^{4}$ |

$$
\begin{aligned}
S(x)= & \alpha^{12}+\alpha^{2} x+\alpha^{13} x^{2}+\alpha^{6} x^{3}+\alpha^{10} x^{4}+\alpha x^{5}+\alpha^{10} x^{6}+\alpha^{2} x^{7} \\
& +\alpha^{9} x^{8}+\alpha^{4} x^{9}+\alpha^{7} x^{10}+\alpha^{7} x^{11}+\alpha^{5} x^{12}+x^{13}+\alpha^{6} x^{14} .
\end{aligned}
$$

# Symmetric Cryptography 

## Block Ciphers

## Block Ciphers

$M \in \mathbb{F}_{2}^{m}$ : plaintext,
$C \in \mathbb{F}_{2}^{m}:$ ciphertext, $K \in \mathbb{F}_{2}^{k}$ : key.

## Block Cipher

$$
\begin{aligned}
E: \quad \mathbb{F}_{2}^{m} \times \mathbb{F}_{2}^{k} & \rightarrow \mathbb{F}_{2}^{m} \\
(M, K) & \mapsto E(M, K)=C .
\end{aligned}
$$

For a fixed key $K \in \mathbb{F}_{2}^{k}$, $E_{K}(M) \mapsto C$, is a permutation of $\mathbb{F}_{2}^{m}$.

## Block Ciphers

$M \in \mathbb{F}_{2}^{m}:$ plaintext,
$C \in \mathbb{F}_{2}^{m}$ : ciphertext, $K \in \mathbb{F}_{2}^{k}$ : key.

## Block Cipher

$$
\begin{aligned}
E: \quad \mathbb{F}_{2}^{m} \times \mathbb{F}_{2}^{k} & \rightarrow \mathbb{F}_{2}^{m} \\
(M, K) & \mapsto E(M, K)=C .
\end{aligned}
$$

For a fixed key $K \in \mathbb{F}_{2}^{k}$, $E_{K}(M) \mapsto C$, is a permutation of $\mathbb{F}_{2}^{m}$.

Problems? In practice: $m \geq 64$ and $k \geq 80$

- For one key $K, E_{K}$ permutes $2^{64}$ elements!

## Block Ciphers

$M \in \mathbb{F}_{2}^{m}:$ plaintext,
$C \in \mathbb{F}_{2}^{m}$ : ciphertext, $K \in \mathbb{F}_{2}^{k}$ : key.

## Block Cipher

$$
\begin{aligned}
E: \quad \mathbb{F}_{2}^{m} \times \mathbb{F}_{2}^{k} & \rightarrow \mathbb{F}_{2}^{m} \\
(M, K) & \mapsto E(M, K)=C .
\end{aligned}
$$

For a fixed key $K \in \mathbb{F}_{2}^{k}$, $E_{K}(M) \mapsto C$, is a permutation of $\mathbb{F}_{2}^{m}$.

Problems? In practice: $m \geq 64$ and $k \geq 80$

- For one key $K, E_{K}$ permutes $2^{64}$ elements!
- $2^{80}$ different permutations!

## Substitution Permutation Networks

## Add Round Key

$$
\mathbb{F}_{2}^{m} \times \mathbb{F}_{2}^{m} \rightarrow \mathbb{F}_{2}^{m}
$$

$$
(M, \text { SubK }) \mapsto M \oplus \text { SubK. }
$$

$M=\left(M_{0}, \ldots, M_{m / n-1}\right), M_{i} \in \mathbb{F}_{2}^{n}$ (word).

## SBox (substitution)

Nonlinear Permutation:

$$
\begin{aligned}
S: & \mathbb{F}_{2}^{n} \rightarrow \mathbb{F}_{2}^{n} \\
& M_{i} \mapsto\left(S_{0}\left(M_{i}\right), \ldots, S_{n-1}\left(M_{i}\right)\right) .
\end{aligned}
$$

In practice: $n=4,8$.
Permutation (diffusion)
Linear Permutation:

$$
\mathbb{F}_{2}^{m} \rightarrow \mathbb{F}_{2}^{m}
$$

## Example of an SBox

$$
n=4
$$

Multivariate:

| $x$ | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | $a$ | $b$ | $c$ | $d$ | $e$ | $f$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $S_{0}(x)$ | 1 | 0 | 1 | 0 | 0 | 1 | 1 | 0 | 0 | 1 | 1 | 0 | 0 | 0 | 1 | 1 |
| $S_{1}(x)$ | 1 | 1 | 1 | 0 | 1 | 0 | 1 | 0 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 0 |
| $S_{2}(x)$ | 1 | 1 | 0 | 1 | 1 | 1 | 1 | 0 | 0 | 0 | 0 | 0 | 1 | 0 | 0 | 1 |
| $S_{3}(x)$ | 1 | 1 | 1 | 1 | 0 | 1 | 0 | 1 | 0 | 0 | 1 | 1 | 0 | 0 | 0 | 0 |

Univariate:

| $x$ | 0 | 1 | $\alpha$ | $\alpha^{2}$ | $\alpha^{3}$ | $\alpha^{4}$ | $\alpha^{5}$ | $\alpha^{6}$ | $\alpha^{7}$ | $\alpha^{8}$ | $\alpha^{9}$ | $\alpha^{10}$ | $\alpha^{11}$ | $\alpha^{12}$ | $\alpha^{13}$ | $\alpha^{14}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $S(x)$ | $\alpha^{12}$ | $\alpha^{11}$ | $\alpha^{7}$ | $\alpha^{5}$ | 0 | $\alpha^{6}$ | $\alpha^{10}$ | $\alpha^{2}$ | $\alpha^{9}$ | $\alpha^{13}$ | $\alpha^{14}$ | $\alpha^{3}$ | 1 | $\alpha^{8}$ | $\alpha$ | $\alpha^{4}$ |

## Example of an SBox

$$
n=4
$$

Multivariate:
$S_{0}(x)=1+x_{0}+x_{2}+x_{3}+x_{1} x_{2}+x_{1} x_{3}+x_{2} x_{3}+x_{0} x_{2} x_{3}+x_{1} x_{2} x_{3}$
$S_{1}(x)=1+x_{3}+x_{0} x_{1}+x_{0} x_{2}+x_{0} x_{3}+x_{0} x_{1} x_{2}+x_{0} x_{1} x_{3}+x_{0} x_{2} x_{3}$
$S_{2}(x)=1+x_{1}+x_{3}+x_{0} x_{1}+x_{1} x_{2}+x_{1} x_{3}+x_{2} x_{3}+x_{0} x_{1} x_{3}+x_{0} x_{2} x_{3}$
$S_{3}(x)=1+x_{2}+x_{3}+x_{0} x_{2}+x_{1} x_{3}+x_{2} x_{3}+x_{0} x_{2} x_{3}+x_{1} x_{2} x_{3}$

Univariate:

$$
\begin{aligned}
S(x)= & \alpha^{12}+\alpha^{2} x+\alpha^{13} x^{2}+\alpha^{6} x^{3}+\alpha^{10} x^{4}+\alpha x^{5}+\alpha^{10} x^{6}+\alpha^{2} x^{7} \\
& +\alpha^{9} x^{8}+\alpha^{4} x^{9}+\alpha^{7} x^{10}+\alpha^{7} x^{11}+\alpha^{5} x^{12}+x^{13}+\alpha^{6} x^{14}
\end{aligned}
$$

# Symmetric Cryptography 

## Cryptographic Properties

## Algebraic Degree of a Vectorial Boolean Function

## Algebraic Degree

- The algebraic degree of a Boolean function

$$
\begin{aligned}
& f(x)=\bigoplus_{u \in \mathbb{F}_{2}^{n}} a_{u} x^{u} \text { is } \\
& \qquad \operatorname{deg}_{a l g}(f)=\max _{u \in \mathbb{F}_{2}^{n}}\left\{w t(u) \mid a_{u}=1\right\} .
\end{aligned}
$$

Example: $f\left(x_{0}, x_{1}, x_{2}\right)=x_{0} \oplus x_{0} x_{1} \oplus x_{0} x_{1} x_{2}$.
The Hamming weight of a Boolean function of $n$ variables $f$, $w t(f)$, is odd if and only if $\operatorname{deg}_{\text {alg }}(f)=n$.

## Algebraic Degree

- The algebraic degree of a ( $n, m$ )-function $F$ with coordinates $f_{0}, \ldots, f_{m-1}$ is

$$
\operatorname{deg}_{a l g}(F)=\max _{0 \leq i \leq m-1} \operatorname{deg}_{a l g}\left(f_{i}\right)
$$

## Algebraic Degree

SBox: $S=\left(S_{0}, \ldots, S_{n-1}\right)$.
Plaintext: $x=\left(x_{0}, \ldots, x_{n-1}\right)$ (known).
Key: $\kappa=\left(k_{0}, \ldots, k_{n-1}\right)$ (unknown).

For all coordinate functions $S_{i}$,

Nonlinear system of $m$ equations and $m$ unknowns.

$$
S_{i}(x+\kappa)=\bigoplus_{u} s_{u}(x+\kappa)^{u} .
$$

Example: $n=4$,

$$
\begin{aligned}
(x+\kappa)^{0110} & =\left(x_{1} \oplus k_{1}\right) \cdot\left(x_{2} \oplus k_{2}\right) \\
& =x_{1} x_{2} \oplus x_{1} k_{2} \oplus x_{2} k_{1} \oplus k_{1} k_{2} .
\end{aligned}
$$

## Algebraic Degree

SBox: $S=\left(S_{0}, \ldots, S_{n-1}\right)$.
Plaintext: $x=\left(x_{0}, \ldots, x_{n-1}\right)$ (known).
Key: $\kappa=\left(k_{0}, \ldots, k_{n-1}\right)$ (unknown).

For all coordinate functions $S_{i}$,

$$
S_{i}(x+\kappa)=\bigoplus_{u} s_{u}(x+\kappa)^{u} .
$$

Example: $n=4$,

$$
\begin{aligned}
(x+\kappa)^{0110} & =\left(x_{1} \oplus k_{1}\right) \cdot\left(x_{2} \oplus k_{2}\right) \\
& =x_{1} x_{2} \oplus y_{0} \oplus y_{1} \oplus y_{2}
\end{aligned}
$$

Nonlinear system of $m$ equations and $m$ unknowns.

Linear system of $m$ equations and $>m$ unknowns.
The lower the algebraic degree is, the less unknowns we have, the easier to resolve the system is.

## Univariate degree

## Univariate Degree

- The univariate degree of a $(n, n)$-function $F(x)=\sum_{i=0}^{2^{n}-1} c_{i} x^{i}$ is

$$
\operatorname{deg}(F)=\max _{0 \leq i \leq 2^{n}-1}\left\{i \mid c_{i} \neq 0\right\} .
$$

Remark:
The algebraic degree of a function $F(x)=\sum_{i=0}^{2^{n}-1} c_{i} x^{i}$ is

$$
\operatorname{deg}_{\mathrm{alg}}(F)=\max _{0 \leq i \leq 2^{n}-1}\left\{w t(i) \mid c_{i} \neq 0\right\} .
$$

## Univariate Degree

The univariate degree of the SBox, $\operatorname{deg}(S)$, influences the univariate degree of the cipher $E_{K}$ (and does not depend on $K$ ).

If $\operatorname{deg}\left(E_{K}^{-1}\right)=d$ is "sufficiently" low
$\Downarrow$
with $d+1$ pairs $\left(C_{i}, M_{i}\right)$ of ciphertext/plaintext we can interpolate a unique polynomial $E^{\prime}$ of degree $d$ such that $E^{\prime}\left(C_{i}\right)=M_{i}, 0 \leq i \leq d$.

## Univariate Degree

The univariate degree of the SBox, $\operatorname{deg}(S)$, influences the univariate degree of the cipher $E_{K}$ (and does not depend on $K$ ).

If $\operatorname{deg}\left(E_{K}^{-1}\right)=d$ is "sufficiently" low

In conclusion, for every $C \in \mathbb{F}_{2^{m}}$,

$$
E^{\prime}(C)=E_{K}^{-1}(C)=M
$$

with $d+1$ pairs $\left(C_{i}, M_{i}\right)$ of
ciphertext/plaintext we can interpolate a unique polynomial $E^{\prime}$ of degree $d$ such that $E^{\prime}\left(C_{i}\right)=M_{i}, 0 \leq i \leq d$.

## Differential Property

## Definition

The differential uniformity of an SBox $S$ is defined as

$$
\delta(S)=\max _{a \neq 0, b \in \mathbb{F}_{2^{n}}} \#\{x \mid S(x)+S(x+a)=b\} .
$$

$$
y+y^{\prime}=?
$$

$S$ is Almost Perfect Nonlinear (APN) if and only if $\delta(S)=2$.

## Design Problem

## Practical Requirements

## What do we want for a "good" SBox?

## What do we want for a "good" SBox?

- a high algebraic degree,

## What do we want for a "good" SBox?

- a high algebraic degree,
- a high univariate degree,

## What do we want for a "good" SBox?

- a high algebraic degree,
- a high univariate degree,
- a "low" differential uniformity,

## What do we want for a "good" SBox?

- a high algebraic degree,
- a high univariate degree,
- a "low" differential uniformity,
- a "good" hardware/sofware implementation,

## What do we want for a "good" SBox?

- a high algebraic degree,
- a high univariate degree,
- a "low" differential uniformity,
- a "good" hardware/sofware implementation,

## What do we want for a "good" SBox?

- a high algebraic degree,
- a high univariate degree,
- a "low" differential uniformity,
- a "good" hardware/sofware implementation,
+ a permutation,

## What do we want for a "good" SBox?

- a high algebraic degree,
- a high univariate degree,
- a "low" differential uniformity,
- a "good" hardware/sofware implementation,
+ a permutation,
+ an inverse verifying all of these requirements (!!) We already know that $\delta(S)=\delta\left(S^{-1}\right)$.

## Design Problem

## APN Permutations

## APN Permutations on $\mathbb{F}_{2^{n}}$

- $n$ is odd: $x^{r}$ for some (few) integers $r$. When $3 \mid n$ but $9 \nmid n$, one of the shape $x^{s}+\gamma x^{t}$.

## APN Permutations on $\mathbb{F}_{2^{n}}$

- $n$ is odd: $x^{r}$ for some (few) integers $r$. When $3 \mid n$ but $9 \nmid n$, one of the shape $x^{s}+\gamma x^{t}$.
- $n=4$ : No APN Permutations.

## APN Permutations on $\mathbb{F}_{2^{n}}$

- $n$ is odd: $x^{r}$ for some (few) integers $r$.

When $3 \mid n$ but $9 \nmid n$, one of the shape $x^{s}+\gamma x^{t}$.

- $n=4$ : No APN Permutations.
- $n=6$ : Dillon's function ['09]:

$$
\begin{aligned}
D(x)= & \alpha^{36} x^{60}+\alpha^{44} x^{58}+\alpha^{40} x^{57}+\alpha^{55} x^{56}+\alpha^{26} x^{54}+\alpha^{23} x^{53} \\
